1. What are key things to consider when modelling data to use in a model-driven app? Select all that apply.

1 / 1 point

☒ Consider what data the app will need.

✔ **Correct**

Correct! The starting point for the data model is to determine what data needs to be included.

☐ What type of screen will the users access the data on.

☒ How the data relates to other data.

✔ **Correct**

Correct! The data in a data model can come from multiple sources so it is important to understand how the blocks of data relate to each other.

2. When you created a model-driven app, you set the data type of one of the columns to decimal. The users of the app have indicated that they would prefer to see the numbers displayed as currency. What can you do in this situation?

1 / 1 point

☐ Go to the fields list in the entity and change the required setting to optional. Then change the data type.

☐ Select the data entries in the table and change the format to currency.

☒ Delete the column and add it again with a currency format.

✔ **Correct**

Correct! Your choice of data type for a column is vitally important when creating a model-driven app. The data type cannot be changed if you have selected the wrong one. To change the format, you need to delete the column and re-insert it and you risk losing all the data in that column.

3. You have created an app which allows staff in your organization to track their expenses in real time. You added a column called type of travel to the app and designed it so that if the user chooses automobile, then the mileage field is required. What is this an example of?

1 / 1 point

☒ A Business Rule

☐ A Business Process Flow

✔ **Correct**

Correct! A Business Rule allows you to control behavior at a data level which allows you to set a condition for when a field is required.

4. You are creating an app which will be used by different groups of users in your organization. When they are looking at the app, you would like the administration team and the manufacturing teams to see different columns of information in the app. Which element in the model-driven app should you customize?

1 / 1 point

☐ The Dashboard

☐ The Form

☒ The View.

✔ **Correct**

Correct! Customized views allow you to hide columns so that users selecting that view will not see them.

5. Which security role must you have to share an app? Select all that apply.

1 / 1 point

☐ Dataverse User

☒ System Admin

✔ **Correct**

Correct! If you have the System Admin role, you can share a model-driven app.

☒ Environment Admin

✔ **Correct**

Correct! If you have the Environment Admin role, you can share a model-driven app created in that environment.

6. A user contacts you to say that they have lost the email that you sent them containing the link to the app when you added them as a user. What should you do so that they can access the app?

1 / 1 point

☒ Locate the app in the list of apps and chose to edit. In the app designer screen go to properties tab and then copy the web URL to send to them.

☐ Assign the user a security role and then share with the user again.

✔ **Correct**

Correct! The user still has a security role assigned so you will be able to simply copy the URL and send it to them again.
