Automated solution lesson summary

In a world of increasing distraction, it is more important than ever to alleviate repetitive or menial tasks to better focus on the important work at hand. Power Automate allows businesses to do just that by leveraging hundreds of connectors, templates, triggers and actions to allow beginners and advanced developers alike to craft powerful workflows and increase business efficiency.

Now that you have reviewed this module, you should be able to:

- Create a flow from a template
- Create a recurring flow on a schedule
- Create a flow triggered by a button
- Create an approval request flow and utilize the approval center
- Create a business process flow

Key takeaways

Here are the four key takeaways:

1. Power Automate has hundreds of connectors to ensure you can create useful solutions that integrate with all your business programs.

2. Power Automate has hundreds of templates that combine actions and triggers from connectors to create workflows useful for any business scenario.

3. Automation can save your business time and energy spent on repetitive tasks and make your business run more smoothly.

4. Power Automate's approval center allows users to easily see and manage approvals from a variety of flows to ensure ease of use and efficiency.
