1. Your company want to create an additional webpage, separate to the main company website which will provide a complete self-service solution for the customer. Your manager asks you to create the portal for this in Power Apps. When you try to do this, you cannot create the portal. What might cause this to happen? Select all that apply?

   1 / 1 point

   ☑ You are not a system administrator in the Environment you are working in.

   > ✓ **Correct**
   > Correct! You must have a System Administrator role in the Microsoft Dataverse environment that the portal is in.

   ☑ The company license may not include Power Apps portal and any free trial periods may have expired.

   > ✓ **Correct**
   > Correct! Power Apps Portal is not included in all license plans. It is possible to sign up for a free trial to explore the feature, but this will expire after a specific calendar interval.

   ☐ The portal needs to be created by IT and linked to your company website and you don't have administrator rights on the company site.

2. You have created and provisioned a web portal. You would like to customize the appearance of the website portal to match the company's brand colors and you decide to begin by applying a preset theme and then customizing it. What steps would allow you to do this?

   1 / 1 point

   ○ Choose to edit the portal app if you are not already doing so. Choose themes from the navigation bar on the left and click on one of the preset themes to apply it to the portal. You can now choose to customize it.

   ○ Choose to edit the portal app if you are not already doing so. On the navigation pane on the left, choose themes. Click on one of the preset themes to select it and then click on Add Theme. You can now choose to customize it.

   ⦿ Choose to edit the portal app if you are not already doing so. Choose themes from the navigation bar on the left and switch on the enable basic theme toggle. Select one of the preset themes to apply it to the portal. You can now choose to customize it.

   > ✓ **Correct**
   > Correct! In Power Apps portals, the Enable basic theme feature is set to off by default. You will need to switch this option to on to use the preset themes.

3. Now that you have created the portal website, other managers have expressed concerns about security and have asked you to let them know what the recommended authentication mechanism in Power Apps Portals is. What should you answer?

   1 / 1 point

   ○ Open ID

   ○ OAuth2

   ○ WS-Federation

   ⦿ Azure AD B2C

   > ✓ **Correct**
   > Correct! Azure AD B2C is the recommended identity provider for authentication.

4. The department that you work in uses manual, paper-based processes. You have suggested to the other members of the team that Power Automate flows could replace these processes. One colleague would like a quick way to upload the days financial data to the company's database after they had checked it. Which type of flow would best achieve this?

   1 / 1 point

   ⦿ An Instant Flow

   ○ A Business Process Flow

   ○ A Scheduled Cloud Flow

   > ✓ **Correct**
   > Correct! An instant flow is one that is triggered by a click of a button on a mobile or desktop device. Since the staff member needs to manually confirm the data is correct before uploading it, this would be the correct approach.

5. Your company offers discounts if customers meet certain criteria. When a staff member takes an order, they complete a customer detail form and send it to you as an email attachment with a subject line of Discount Request. The procedure until now has been that you would then forward the email to an account manager who could approve the request.

   1 / 1 point

   To speed up this process, you want to create a flow that will automatically save the attachment to a OneDrive folder when the email arrives. This will trigger another approval flow which routes the request for approval. This is the only type of attachment that you want this to happen to. What steps should you take?

   ○ Use the Save Office 365 email attachments to OneDrive for Business template and in the On New Email

Step, choose Advanced Options. Add the sales teams email addresses to the from box.

○ Use the Save Office 365 email attachments to OneDrive for Business template and in the On New Email Step, choose Advanced Options. Add the term Discount Request to the subject filter.

○ Use the Save Office 365 email attachments to OneDrive for Business template and create a condition step which looks for the name of the attachment and then moves it to the appropriate folder.

> ⊘ **Correct**
> Correct! Since you only want the attachments relating to the discount to move to the folder, this would be the correct option.

6. You created a scheduled cloud flow which sends out reminders to staff to complete project time sheets. When you created the flow, you set it to trigger on a one-day frequency. You would now like the flow to only trigger on certain days of the week. What steps should you take to achieve this?

1 / 1 point

◉ Edit the Flow and in the Recurrence step, click on Advanced Options. Change the frequency to Week and then select the days when you want the flow to run.

○ Edit the Flow and in the Recurrence step, click on Advanced Options and then select the days when you want the flow to run.

○ Delete the Flow and recreate it with a different interval choice.

> ⊘ **Correct**
> Correct! The advanced options choice will display different choices depending on the value of the Interval and Frequency fields.

7. In your company, account managers must authorize the discount amount offered to a customer. You have created an approval flow in Power Automate which triggers as soon as a Discount Request form appears in a specific OneDrive for Business folder. In the past, you notified account managers by email when a discount request needed their approval. Now that the process is automated, how will they know that they need to review the request? Select all that apply.

1 / 1 point

☑ They will receive an email request which offers them an approve or decline choice.

> ⊘ **Correct**
> Correct! The approval flow will automatically generate an email which contains Approve or Decline buttons.

☑ They can go to the Approvals Center in Power Automate and see requests there.

> ⊘ **Correct**
> Correct! In the Approvals Center they will be able to see any approvals they have sent or received, as well as their approval history.

☐ They will have to monitor the OneDrive for Business folder where the discount request forms are saved.

8. You have created a Power Automate approval flow which has received positive feedback. A colleague in an office based in a different continent has emailed you saying that they would like to use the flow. You know that the company has organized the tenants by geographic location, so the colleague's office is in a different tenant. How can you give them access to the flow?

1 / 1 point

○ It will not be possible as they are in a different tenant.

◉ Export the Flow.

○ Send them a share link to the flow.

> ⊘ **Correct**
> Correct! When you export the flow to a package, you can then send the resulting zip file to a co-worker in the same tenant or to someone in another tenant.

9. You created a business flow to guide staff through recording customer orders and shared it with them. Your colleagues have indicated that it is not working as expected. When you investigate you realize that you based the flow on the wrong orders table. Which of the following can you do?

1 / 1 point

◉ You cannot change the base table name once you have created the process.

○ Find the flow in the list of flows and choose to edit it. Select the first step and in the properties pane, select a different table.

○ Find the flow in the list of flows and choose to rename it. In the Choose a Table box, select the correct table.

> ⊘ **Correct**
> Correct! You cannot change the base table for the process after it has been created.

10. You are creating a Business Process Flow which guides staff through recording customer orders. Customers are given a credit limit immediately if the company revenue exceeds a set amount. As a result, one of the stages in the process flow will be to check the annual revenue for the company and then update the credit limit if appropriate. How can you add this to the Business Process Flow as you are creating it?

1 / 1 point

◉ In the components panel on the right, chose the Condition stage and drag it on to the design canvas. In the Rule 1 area of the properties tab, customize the operator, type, and value boxes.

○ In the Component panel on the right, select the IF/Then/Else condition type from the Condition drop down list and drag it on to the design canvas.

○ In the components panel on the right, chose the Condition stage and drag it on to the design canvas. In the properties tab, choose New Business Rule and then customize the operator, type, and value boxes.

⊘ **Correct**
Correct! Once you select the Condition stage a default Rule 1 is created which you can customize as you wish.

○ In the components panel on the right, chose the Condition stage and drag it on to the design canvas. In the properties tab, choose New Business Rule and then customize the operator, type, and value boxes.

⊘ **Correct**
Correct! Once you select the Condition stage a default Rule 1 is created which you can customize as you wish.
